

Brunswick Cloud Offers – Multiple Products

As of July 25, 2018, Brunswick Cloud now supports multiple products/packages on a single offer/coupon. As an example, this will allow a center to create a single offer for \$1 off any burger or 10% of any package.

Creating offers with multiple products

Create an offer in the Brunswick Cloud under Dashboard > Offers > +Create New Offer. Provide the Offer Name and select the Offer Type. On Step 3 (Product or Package), select the Product/Packages that apply to the Offer by clicking the individual Product/Package on the left column to apply it to the Offer in the right column. Click any item in the right column to return it to the left column, removing it from the Offer.

Offer - 1/2 off any drink

Go Back Step 3 of 8 Next

Please select at least one product or package.

Products

- 1/2# Bacon Cheese

Diet

Continue creating the Offer as identified with the Offer Creation process. For more information on creating Offers, please see the [Support section of the Brunswick Cloud](#).

NOTE: Simple Coupons types do not apply to product/packages, but also do not do any automated discounting or tracking and are generally used for non-discounting type offers (i.e. Free Bumper sticker night)

Redeeming a coupons

When a customer presents the coupon for discount, one of the applicable products for the offer must be on the tab before selecting the Scan Coupon button in Sync Desk.

Existing coupons/offers

For centers that already had coupons active and in the marketplace, these have not been affected and converted to allow multiple products. Please notify Brunswick Technical Support if any problems occur with offers that were created before 7/25/18.
